## **REALLY COOL NEW TECHNOLOGIES**

*What if you could simply wander around from place to place and use your notebook to connect to the Internet or your office computer system without connecting any wires or looking for a WiFi hotspot? Now you can, using mobile broadband.*

Mobile Broadband takes advantage of EVDO (Evolution Data Only/Evolution Data Optimized) and provides fast wireless broadband (3G) Internet service directly to your laptop. You take the Internet with you, and can surf the Web from almost any location in most major domestic cities and airports. Mobile broadband is limited to certain coverage zones. Once you leave these zone, but are still in range of a cellular tower, Internet access will automatically re-adjust to modem-type speeds. Once you leave the range of the cellular tower, Internet access will be disabled. Both Verizon and Sprint offer mobile broadband. Verizon was the first provider, but Sprint has been rolling out coverage very rapidly and is catching up to Verizon's. Dell, HP and others make notebooks that are mobile broadband-capable. For more information visit [www.evdoinfo.com](http://www.evdoinfo.com) and select "What is EVDO?".

*What if you could find any document or file on your computer system in seconds? Now you can using ISYS.*

ISYS:desktop 7 is a comprehensive desktop search tool designed to find information on your PC as well as across your office network or workgroup. With more than 30 foreign languages, 140 different supported file formats, and a user-friendly interface, the ISYS:desktop search tool ensures you spend less time looking for information and more time working with it. Though many companies make search software, we have found ISYS to be the fast, reliable, and among the easiest to use. Makes searching for information on your network work the same as searching on the Internet.

*What if you knew who was using your Internet bandwidth and how? Now you can with ViewPoint.*

ViewPoint is an Internet monitoring tool designed to work specifically with the SonicWALL TZ 170 family of firewalls. At a fraction of the cost of third party software, ViewPoint provides detailed reports of Internet usage by user, site visited, date and time, and downloading/uploading activity. ViewPoint will allow any organization to determine who is abusing their Internet privileges and assist in maintaining network security.

## **FAST, FASTER AND FASTEST SERVICE**

For the fastest possible service, do NOT e-mail or call your favorite LANsultant directly. They are always out of the office solving problems, and may not be able to check their e-mail or voicemail in a timely manner. Either enter the call directly into our online help desk system, send an e-mail to [techs@lansultants.com](mailto:techs@lansultants.com), or call us at 215-546-3124. If calling, Crystal, or whomever answers the phone, can enter your service call. Asking for a specific technician only slows the process down.

## **HOLIDAY SCHEDULE**

LANsultants will be closed on Monday, September 4<sup>th</sup> in celebration of Labor Day.
